DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3, 4, 6-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 3, is the "hollow ladder rung" the same of claim 1? If so, then the applicant has recited that the two rods extend through the same rung. It is suggested that the applicant recite first and second rungs.

With respect to claim 6, lines 8-9, there is no antecedent basis for "the aligned upper openings".

With respect to claim 11, the word "means" is preceded by the word(s) "rod" in an attempt to use a "means" clause to recite a claim element as a means for performing a specified function. However, since no function is specified by the word(s) preceding "means," it is impossible to determine the equivalents of the element, as required by 35 U.S.C. 112, sixth paragraph. See *Ex parte Klumb*, 159 USPQ 694 (Bd. App. 1967).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3634

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6-8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Tyson #6,109,391. Tyson discloses a ladder platform assembly 1 comprised of a first side plate assembly 29, 33, and second side plate assembly 27, 31, each receiving an upper cylindrical protruding means/support rod 17 and lower abutment means/stop member 19 (ladder engaging) extending there through, both means serving to secure the platform assembly to hollow rungs 11 of ladders 7, rod receiving aligned apertures 41, rod locking means 45, 49, and tread 39 mounted between the plate assemblies.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Jung #6,244,383. Jung discloses a ladder platform assembly 300 comprised of a first side plate assembly 306, 308, 311, and second side plate assembly 307, 309, 311, each receiving an upper cylindrical protruding means/support rod 301, 302 and lower abutment means/stop member 303, 304, (ladder engaging) extending there through, both means serving to secure the platform assembly to hollow rungs 5', 5'', of ladder 3, and tread 13 mounted between the plate assemblies.

Allowable Subject Matter

Claims 5 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim, any intervening claims, and in addition to *claim 11*, rewritten to overcome the Section 112 ambiguities as noted above. The primary reason for the allowable subject matter of claims 5 and 9, is the inclusion of side plates attachable to the tread and one of the plates being laterally adjustable relative to the tread to accommodate ladders of varying widths. For claim 11, it is the

Art Unit: 3634

inclusion of the first rod means located adjacent a rear edge of the tread elevated above the second rod means and insertable into the hollow rung opposite the tread.

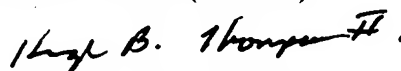

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Christie, Sr. #3,318,415 and Stakes #4,458,783 are cited to teach ladder attachment assemblies.
